

11. Risk Solutions & Advisory

Overview

Effective risk management begins long before an insurance policy is issued. Our Risk Solutions & Advisory practice works alongside businesses, institutional investors, and project developers to conduct rigorous risk identification and analysis — examining operational, financial, reputational, regulatory, and environmental exposures that could affect your organisation's objectives. By understanding your risk landscape in depth, we help you make informed decisions about which risks to retain, reduce, transfer, or eliminate entirely.

Our team of experienced risk consultants brings together expertise across multiple sectors including construction, energy, healthcare, financial services, manufacturing, and the public sector. We deliver comprehensive risk registers, tailored risk management frameworks, insurance programme reviews, and due diligence support for mergers, acquisitions, and project finance transactions. Whether you are a startup building your risk function from the ground up or a large enterprise seeking an independent review, we provide actionable recommendations grounded in both technical expertise and practical business understanding.

The best time to manage a risk is before it becomes a crisis — our advisory team helps you see around corners before the damage is done.

Policy Options

31. Enterprise Risk Assessment

A thorough audit of your organisation's risk landscape — identifying operational, financial, legal, and strategic exposures and prioritising them by likelihood and financial impact.

32. Insurance Programme Review

An independent analysis of your existing insurance portfolio to identify gaps in coverage, eliminate redundant policies, and negotiate better terms and pricing with underwriters.

33. Project & Transaction Due Diligence

Risk advisory support for M&A transactions, project finance, and infrastructure development — including risk allocation review, insurance structuring, and lender compliance support.
